Title

Canadian Cancer Society Lung Cancer Action Plan

Abstract

Lung cancer remains the leading cause of cancer-related death in Canada, claiming nearly 21,000 lives in 2024. In response, the Canadian Cancer Society (CCS) has launched the 2026–2035 Pan-Canadian Lung Cancer Action Plan, a bold national roadmap to reduce lung cancer mortality in Canada by 30% over the next decade. The plan advances a coordinated, equity-focused approach across prevention, early detection and diagnosis, person-centred care, and research and data. By aligning governments, health systems, clinicians, and communities, it aims to deliver measurable, life saving impact nationwide.
